

Avandia Alert! (Summary for Website)

Avandia (Rosiglitazone) is a drug prescribed to help diabetics control their blood sugar levels. Recent Medical studies have found that patients taking Avandia displayed higher risks of stroke, heart failure and death. Avandia has also been shown to significantly increase the risk of heart attack. These risks are heightened in those over age 65. If you or a loved one has taken Avandia, please consult J. Douglas Peters at Charfoos & Christensen P.C. at **800-247-5974**.
